

Cyclistic Ride-Share: Member vs Casual Rider Analysis

Key Findings, Business Recommendations & Growth Opportunities

Key Findings

1. Casual Riders Take Longer Trips

- Avg ride length: 20.6 min vs 12.2 min for members
- Longer ride durations are observed across the rider distribution

Implication:

Casual riders may be more likely to use Cyclistic for leisure and recreational trips.

2. Members Show Commuter-Oriented Usage

- Peak activity occurs during 6–9 AM and 4–7 PM
- Strong weekday commuting pattern is observed
- Casual riders show stronger weekend activity and more evenly distributed usage

Implication:

Members primarily use Cyclistic as a transportation solution, while casual riders may be more likely to use it for leisure and recreational activities.

3. Members Generate More Frequent Usage

- Members account for substantially more rides overall
- Higher ride volume is observed across most days of the week

Implication:

Members appear to exhibit higher engagement and more frequent usage than casual riders.

Business Recommendations

1. Promote Leisure-Focused Membership Benefits

- Scenic route campaigns
- Weekend ride challenges
- Extended ride benefits and leisure-oriented membership messaging

Goal: Align membership offerings with how many casual riders currently use the service.

2. Introduce Flexible Membership Plans

- Weekend-only memberships
- Seasonal and monthly memberships
- Ride bundles

Goal: Reduce commitment barriers for casual riders.

3. Target High-Engagement Casual Riders

- Weekend promotions
- Recreational-location campaigns and location-based membership offers

Goal: Reach casual riders during their highest engagement periods.

Strategic Opportunity

Convert Leisure Riders into Long-Term Members

Evidence suggests many casual riders:

- Ride longer
- Frequently use recreational and tourist-area locations
- Prefer weekends

Position memberships as a way to enhance recreational riding experiences, not just commuting.
