

Cyclistic Bike Share: Member vs Casual Rider Behavior Analysis

Annual Membership Growth Strategy Executive Summary Report for
Cyclistic prepared by the Cyclistic marketing analytics team

Overview

Cyclistic is a Chicago-based bike-share company seeking to increase annual memberships by converting casual riders into members. This report analyzes twelve months of historical trip data to identify behavioral differences between annual members and casual riders. The analysis follows the APPASA framework and combines SQL, DuckDB, and Power BI to generate data-driven insights that support strategic marketing recommendations for membership growth.

Business Objective

Cyclistic aims to increase annual memberships by understanding how annual members and casual riders use its bike-share service differently. The objective of this analysis is to identify behavioral differences between the two rider groups and provide evidence-based marketing recommendations that support long-term membership growth.

Key Findings

- Annual members account for the majority of trips and exhibit consistent weekday commuting patterns.
 - Casual riders take longer trips and show stronger recreational usage, particularly on weekends.
 - Casual rider activity increases during the warmer months, creating seasonal membership conversion opportunities.
 - Behavioral differences between rider groups indicate that targeted marketing strategies are more effective than broad promotional campaigns.
 - Recreational riding patterns present the strongest opportunity for converting casual riders into annual members.
-

Strategic Recommendations

- **Promote leisure-oriented membership value** by emphasizing benefits that align with the recreational riding habits of casual riders.
- **Reduce commitment barriers** through flexible membership options and introductory offers that encourage annual membership adoption.
- **Launch seasonal and peak-period conversion campaigns** during weekends and warmer months to target casual riders when engagement is highest.
